HW-DT8 Mark 3

Congratulations on your choice of the Happy Wanderer HW-DT8 Mark 3 Digital TV Antenna.

This antenna has been designed to meet the needs of the Caravan community in the reception of Digital TV Broadcasts.

. It utilizes the patented ClearStreamT Tapered Loop Technology, which has delivered the first new and superior antenna design to the market in decades. This advanced technology allows the HW-DT8 Mark 3 antenna to be smaller and more powerful across today's DTV spectrum.

. Using anodized aluminium and quality materials, the HW-DT8 Mark 3 is engineered for strength and durability.

. In a compact, easy to stow away form, the HW-DT8 Mark 3 antenna is the first broad spectrum antenna without the performance compromises typically seen in outdated designs of antennas.

. With its unique integrated diplexer, the HW-DT8 Mark 3 takes on the challenge of combining UHF and VHF signals.

. The antenna has excellent range and a generous beam width of 70 degrees.

. It delivers an impressive 98% of signal reception to the digital tuner rather than being lost through impedance mismatches and phase cancellation. In the reception of digital TV it is important to get a signal that is matched to the tuner and has a low noise floor. The technology in this antenna provides for good signal at low levels thereby providing stable picture. In the case of low signal areas, this antenna can provide a usable signal that can be boosted in multi TV environments.

. The HW-DT8 Mark 3 with the ClearStreamT Tapered Loop Technology is the ultimate tool for digital broadcast viewing for the Caravan and RV enthusiast.

Technical details

- . New engineering for current UHF/VHF DTV frequencies
- . VHF MHz (Channels 6-12)
- . UHF MHz (Channels 28-69)
- . Impedance: 75 Ohm output F connection
- . Max gain: UHF: 10.4 dBi VHF :3.1dBi
- . Dimensions: 20"L x 35.5"W x 6.5"D
